

Hey John,

I am presently touring the lovely country side of Southern England. Today we decided to view the huge Megaliths of Stonehenge.

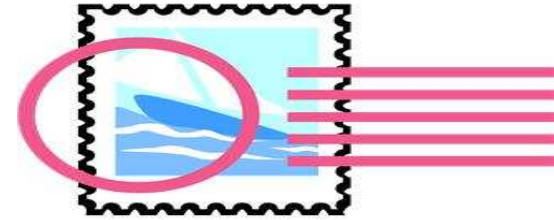

Did you know stone slabs weigh about 45 tonnes? Can you believe that Stonehenge was built approximately 4500 years ago. The ancient people used 3 simple tools and they were sticks, rope, and wooden pegs. Some scientist believe it was also used for astronomy, astrology and spiritual purposes.

See you soon,

Sincerely,

Brandon Arano

P.S. You should've come along besides playing your video games.
